UMS.net implemented for Commercial Water and Energy in Miami, Florida

Continental Utility Solutions, Inc. (CUSI) has recently completed the installation of Utility Management Solution.net (UMS.net) for Commercial Water and Energy, Co., of Miami, Florida. UMS.net is the latest technology in CIS/Billing applications and was developed in Microsoft's .net environment.

UMS.net is a Customer Information System (CIS) and Utility Billing application that allows CW&E to service its apartment resident customers with expanded online bill payment and account management services. UMS.net also provides property managers with the ability to manage their utility accounts online. Through UMS.net property managers can now directly manage the utility billing of their tenants as they move in and out. In addition the web based property management software provides real time information regarding the billing and collection activity of each property and unit.

"We think UMS.net is the most advanced CIS application in the market today," said Lance Cain Vice President of CW&E. "UMS.net will greatly enhance our operational efficiency while extending to our customers and clients the ability to manage their own data through the internet."

"UMS.net is the culmination of thirty-six months of intense effort to build the state of-the-art CIS/Billing application," said Michael Guerriero, president of CUSI. "We set out to develop this application based upon the latest standards and disciplines in the software industry. The results are impressive in terms of product quality, scalability and ease of use."

Continental Utility Solutions, Inc. delivers Utility Billing, Accounting and Operational Software worldwide. Today, over eight hundred water, sewer, gas, electric, waste and sub metering companies use CUSI's Windows, SQL and .Net applications to meet their technology needs. For over twenty years, CUSI has developed and implemented total technology solutions for the management of utilities and local government.
